**POWER WENT OUT IN  
THE WAREHOUSE**

**DATA'S ALREADY HOSTED  
ON THE CLOUD**

# THE TWELVE FACTORS

## **I. Codebase**

One codebase tracked in revision control, many deploys

## **II. Dependencies**

Explicitly declare and isolate dependencies

## **III. Config**

Store config in the environment

## **IV. Backing services**

Treat backing services as attached resources

## **V. Build, release, run**

Strictly separate build and run stages

## **VI. Processes**

Execute the app as one or more stateless processes

## **VII. Port binding**

Export services via port binding

## **VIII. Concurrency**

Scale out via the process model

## **IX. Disposability**

Maximize robustness with fast startup and graceful shutdown

## **X. Dev/prod parity**

Keep development, staging, and production as similar as possible

## **XI. Logs**

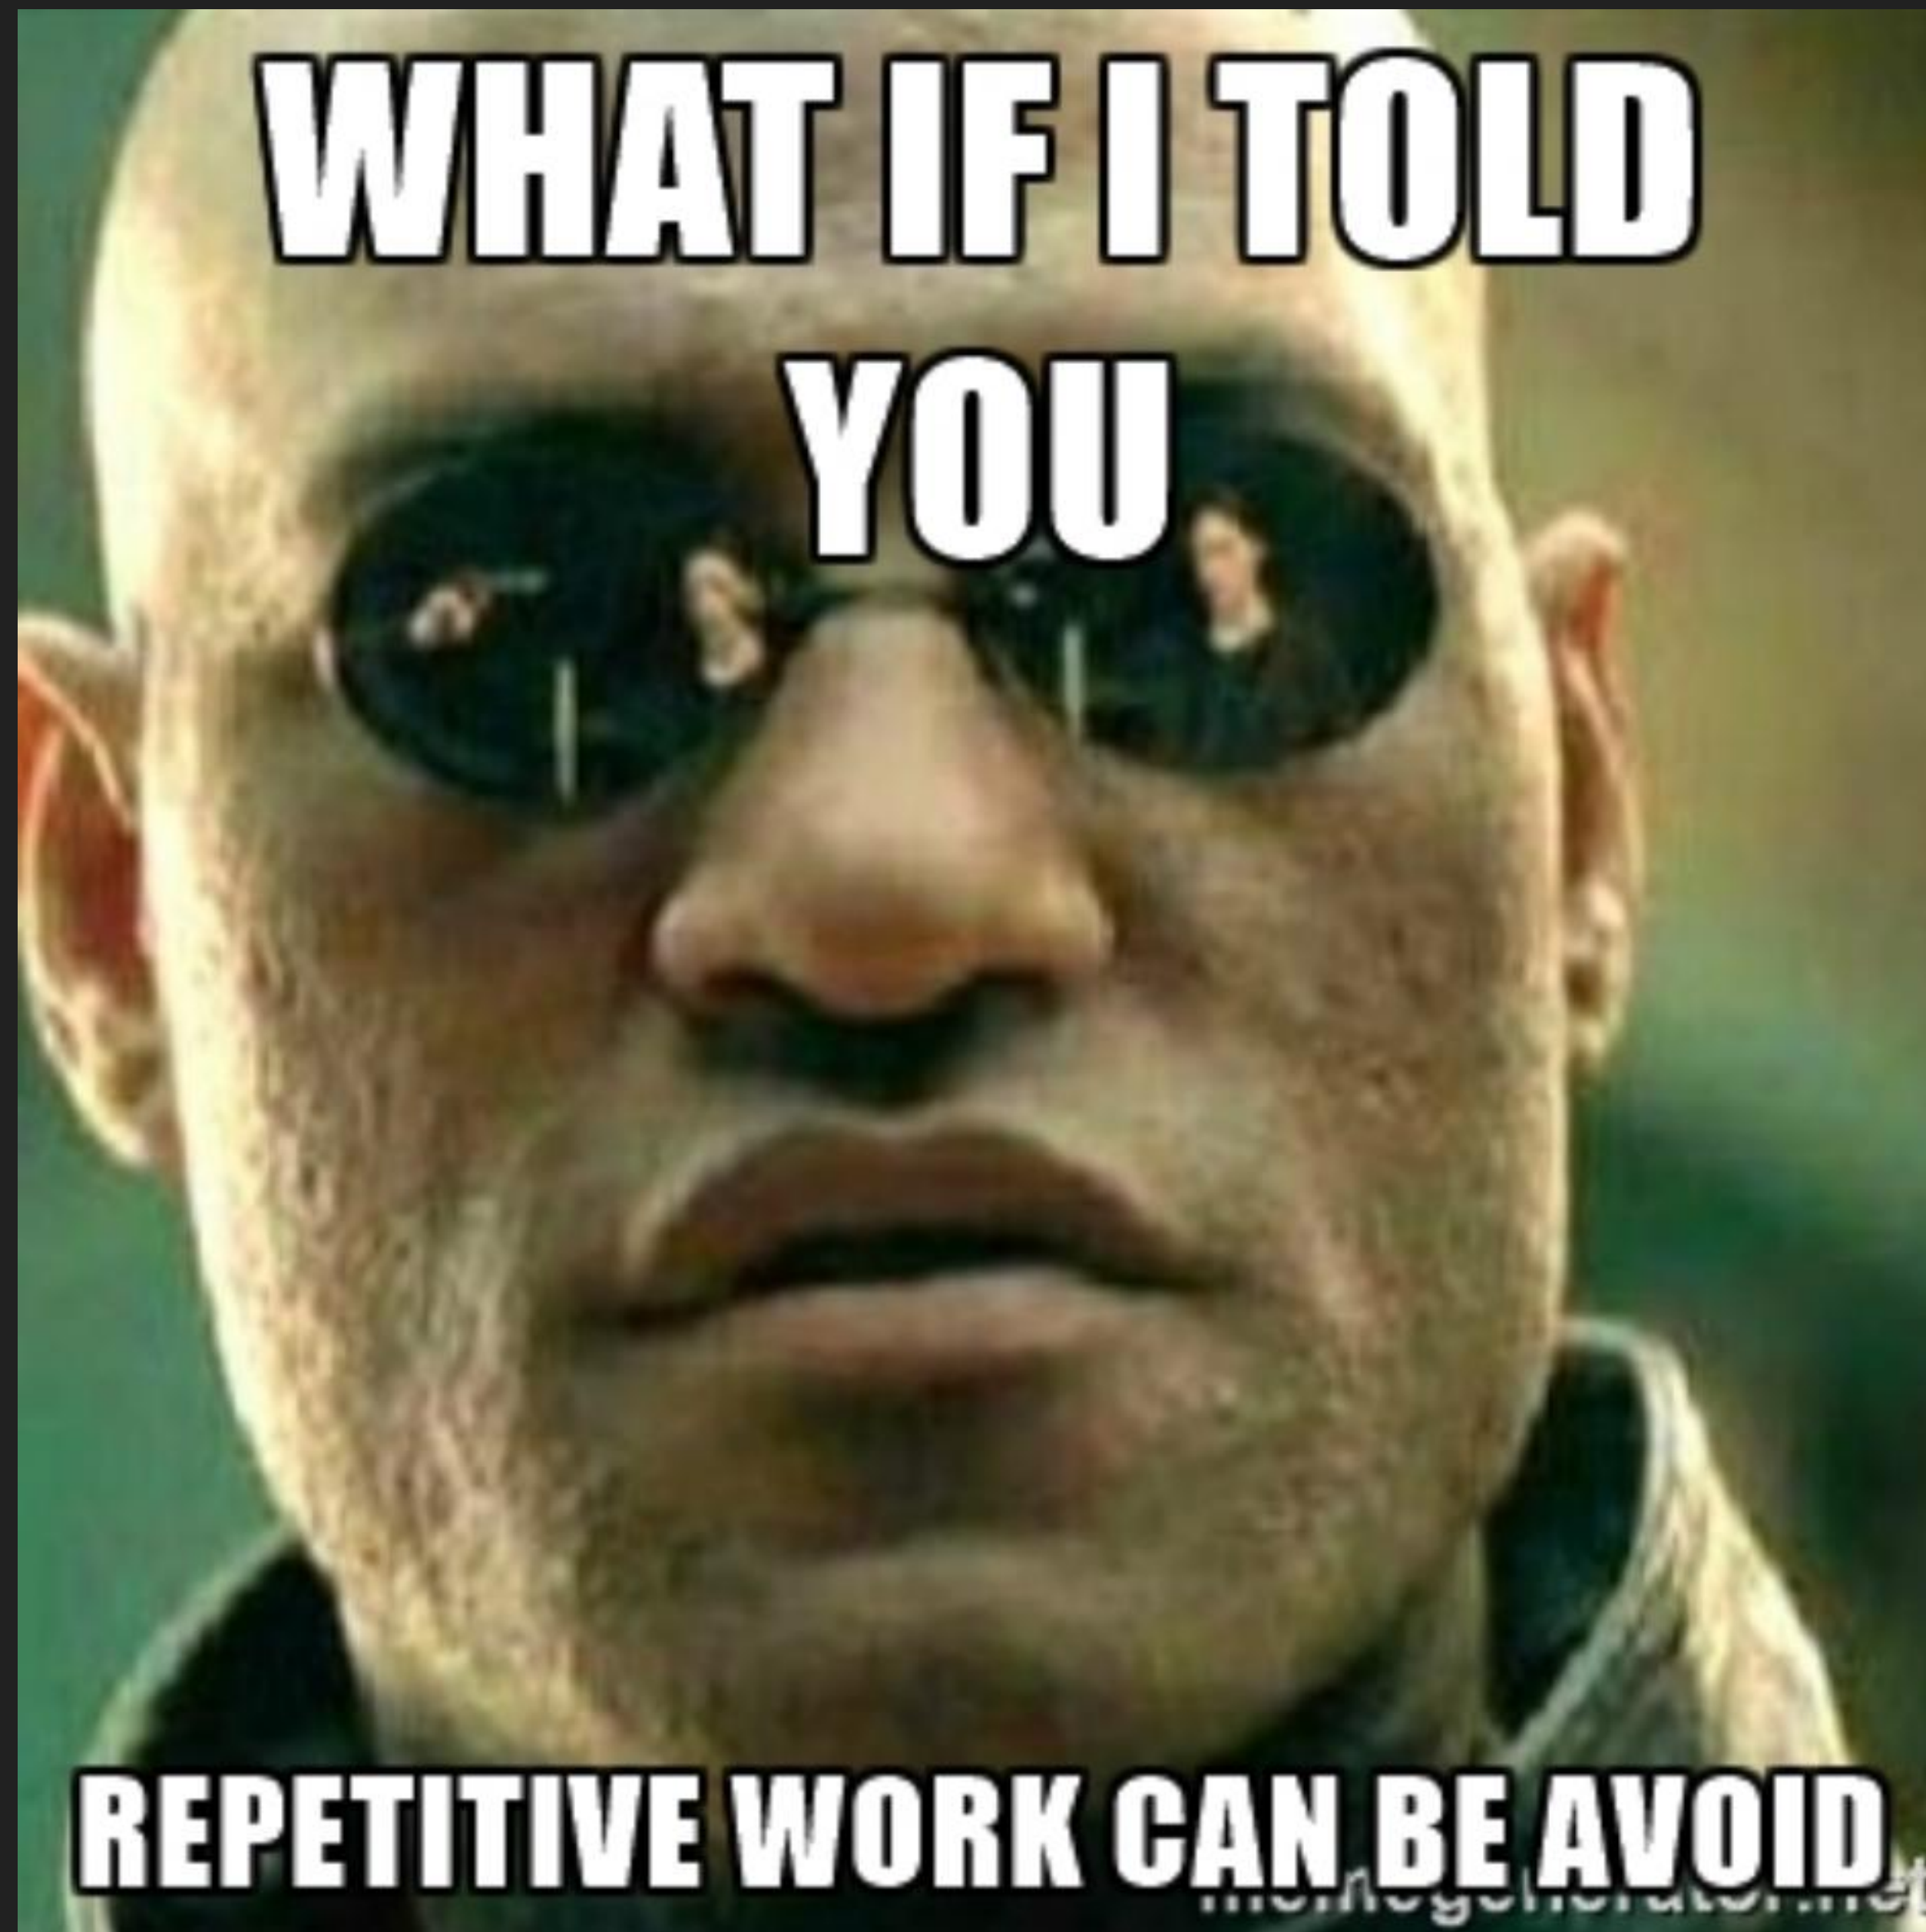

Treat logs as event streams

## **XII. Admin processes**

Run admin/management tasks as one-off processes

embrace the  
resilient cloud  
fault-tolerant  
architecture
