Motivation

Usage Statistics and Market Share of JavaScript Libraries for Websites, July 2016

- JavaScript frameworks are widely used for developing web applications. A recent survey[1] has shown that 73.3% of the top 10 million websites use JavaScript frameworks, such as jQuery, MooTools, Prototype, YUI, and ExtJS. Meanwhile, among all these frameworks, jQuery has a share of 96.2%.

- Source-code-specific search engines (Ohloh, Krugle, Codase)

- Return code snippets or projects
- Treat code as text

- Recent research contributes new approaches that leverage code analysis and code mining, e.g., PARSEWeb, MAPO, SNIFF, and SWCE, to take into account code characteristics, such as API usage patterns and encoded code patterns. However, none of these approaches consider characteristics of JavaScript code snippets or search queries related to using a JavaScript framework API.

Motivation Example

Stack Overflow Question and Description

How to display loading image while actual image is downloading

Some time images take some time to render in the browser. I want show a busy image while the actual image is downloading, and when image is downloaded, the busy image is removed and actual image is be shown there. How can I do this with JQuery or any javascript?

Accepted Answer

You can do something like this:

```
1| // show loading image
2| $('#loader_img').show();
3| // main image loaded ?
4| $('#main_img').load(function(){
5| // hide/remove the loading image
6| $('#loader_img').hide();
7| });
```

You assign load event to the image which fires when image has finished loading. Before that, you can show your loader image.

2) JavaScript is mainly used for client-side scripting in web browsers. Many typical search queries for JavaScript framework API usage describe the user interaction, browser control, asynchronous communication, and the altering of a displayed document content.

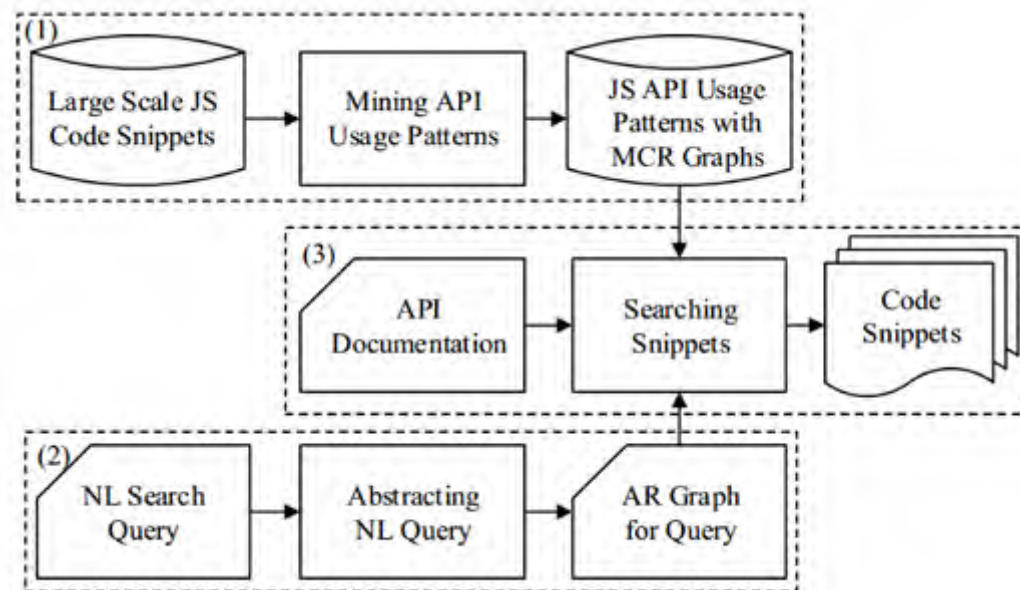

1) In JavaScript, relationships between method calls are complex, beyond sequencing relationships among method calls as commonly captured by existing approaches.

From <http://stackoverflow.com/questions/4635388>

Existing ways of code searching face various respective limitations either in general or in particular for JavaScript.

Approach Overview

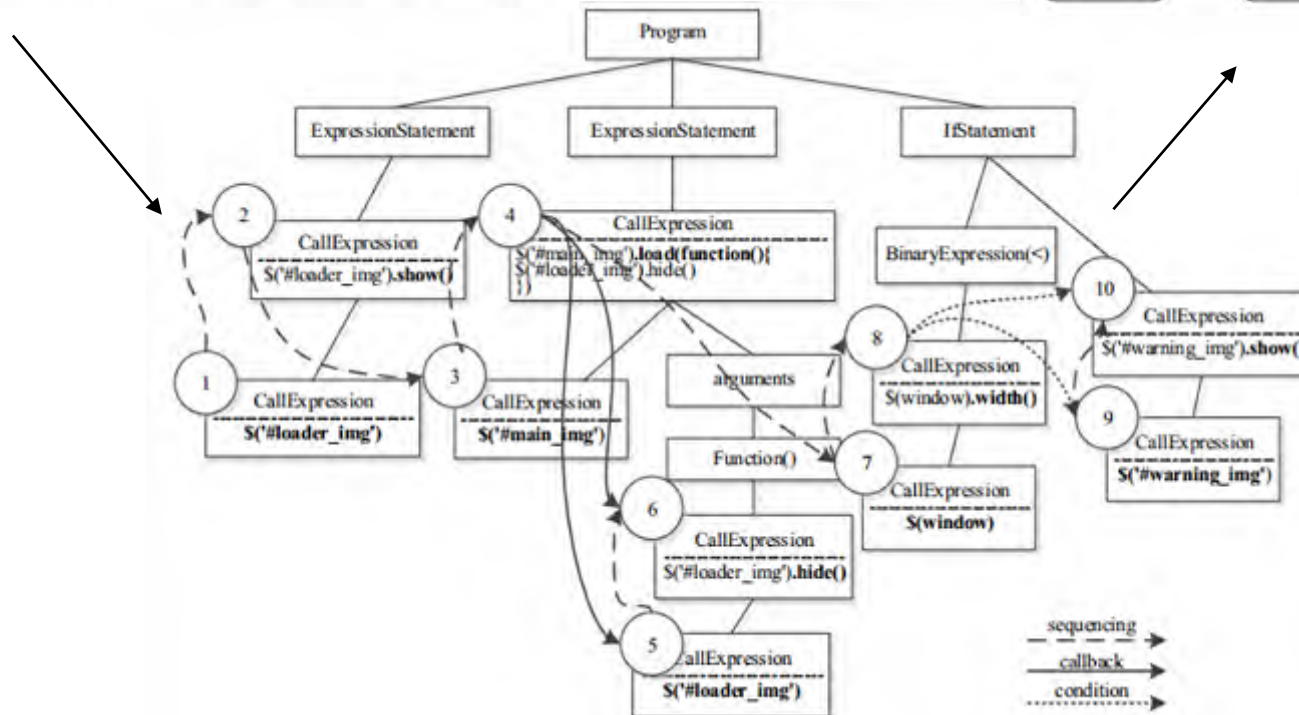

- (1) JavaScript code snippet \rightarrow method call relationship (MCR) graphs
- (2) natural-language (NL) search query \rightarrow action relationship (AR) graph
- (3) RACS reduces code search to the problem of graph search: finding the similar MCR graphs for a given AR graph.

Overview of RACS

```
$('#loader_img').show();
$('#main_img').load(function(){
    $('#loader_img').hide();
});
if($(window).width() < 960 ){
    $('#warning_img').show();
}
```

- Show a busy image while the actual image is downloading, and when image is downloaded, the busy image is removed and actual image is be shown there

Snippet Searching

- Deriving A-MCR graphs from the AR graph
 - MCS measure of text semantic similarity

$$sim(T_1, T_2) = \frac{1}{2} \left(\frac{\sum_{w \in \{T_1\}} (maxSim(w, T_2) * idf(w))}{\sum_{w \in \{T_1\}} idf(w)} + \frac{\sum_{w \in \{T_2\}} (maxSim(w, T_1) * idf(w))}{\sum_{w \in \{T_2\}} idf(w)} \right)$$

- Searching MCR graphs similar to A-MCR graphs
 - Similarity of MCR graphs

$$sim(G_1, G_2) = \frac{mrn(G_1, G_2)}{rn(G_1) + rn(G_2) - mrn(G_1, G_2)}$$

- Selecting Code Snippets
 - Two heuristics: matched keywords and code lengths

Evaluation

- Research questions
 - RQ1: How effectively can RACS search JavaScript code snippets for a given NL search query?
 - RQ2: Can RACS outperform a relationship-oblivious code search approach?
- Evaluation Setup
 - JavaScript snippet base
 - Benchmark queries
 - 50 real-world representative jQuery related queries from Stack Overflow
 - The details of our evaluation subjects and results: <http://taoxie.cs.illinois.edu/racs/>.
- Evaluation Metrics
 - Best hit rank, i.e., the highest rank of the hit snippets for the query
 - Success percentage at k, i.e., the success percentage among the set of queries considering only the top k results returned by a search approach.

27	871063	Check radio option whether no default is set and then set a default.	2	1	2	1	211	376	1
28	4177159	When element clicked, toggle between checked and unchecked.	2	1	3	2	223	98	NF
29	1064089	When someone clicks a link, a word or two to be inserted where the cursor is.	2	1	2	1	320	1687	1
30	437958	When one of these links is clicked, hide the links that are not clicked.	2	1	2	1	230	79	1
31	1212500	Create a CSS class and add it to DOM at runtime with jQuery.	2	1	2	1	184	83	1
32	7717527	jQuery smooth scrolling when clicking an anchor link.	2	1	2	1	179	80	NF
33	9398870	Remove the top and left attribute from the inline style on the div when clicked.	2	1	2	1	199	345	3
34	946534	Insert text into a text area using jquery, upon the click of an anchor tag.	2	1	2	1	189	78	1
35	1925614	Get the value selected from a dropdown menu and change the form action	1	0	2	1	201	79	NF
36	360491	Strip white space when grabbing text with jQuery?	2	1	2	1	178	83	NF
37	2358205	Trigger an event after any other type of iterative callback has completed.	2	1	2	1	234	345	NF
38	4687579	I want just the new "blah" div to fade in after the content gets appended.	2	1	2	1	169	76	1
39	3024391	Get child elements and iterate through each of those elements.	2	1	2	1	197	85	NF
40	2380230	Get the selected option from a dropdown and populate another item with that text.	2	1	2	1	203	98	1
41	316278	Have an element fade in, then in 5000 ms fade back out again	2	1	2	1	187	80	NF
42	2330209	If the "Check Me" checkbox is checked, all the other 3 checkboxes should be enabled.	2	1	2	1	223	485	1
43	4613261	Get the position of layer1 and set the same position to layer2.	2	1	2	1	202	87	1
44	5176803	When the radio button is selected I enable an edit box.	2	1	2	1	198	89	NF
45	4996002	Get the index of the child li relative to it's parent, when clicking that li	2	1	2	1	188	104	1
46	13626517	Disable inputs at first and then enable them when click a link	3	2	3	2	174	84	NF
47	2230704	Get the value of the hidden field when the select is changed.	2	1	2	1	210	93	1
48	6658752	Generate a new tag with class name "test" in h2 by clicking the button	2	1	2	1	186	88	8
49	4076770	When the <select> dropdown is changed, get the value before change.	2	1	2	1	213	80	1
50	1314450	Capture the TAB keypress, cancel the default action.	2	1	2	1	204	479	1

Code Snippet Example

“When I press Enter on the form, the form is submitted”.

```
$("#[id^='relExInput']").keypress(function(A) {  
  if (A.which == 13)  
  {  
    $("#i").val(this.value);  
    $("#calculate").submit();  
  }  
});
```

“If the age checkbox is checked, then I need to show a textbox to enter age, else hide the textbox.”

```
$('.hide-postbox-tog').bind('click.postboxes', function() {  
  var box = $(this).val();  
  if ($(this).prop('checked'))  
  {  
    $('# + box).show();  
    if ($.isFunction(postboxes.pbshow))  
      self.pbshow(box);  
  } else {  
    $('# + box).hide();  
    if ($.isFunction(postboxes.pbhide))  
      self.pbhide(box);  
  }  
  self.save_state(page);  
  self._mark_area();  
});
```

Top 1 ranked code snippet for queries 6 and 7.

Comparison with Relationship-oblivious Approach

- **RACS**: semantic similarity + relationship-aware ranking
- ROCS**: keyword matching + relationship-oblivious (i.e., support-based) ranking
- ROCS+**: semantic similarity + relationship-oblivious ranking
- RACS-**: keyword matching + relationship-aware ranking

Table 3. Comparison results

Metrics	Pattern Searching Method Searching	Relationship-oblivious	Relationship-Aware	Typeless Relationship-Aware
P_1	Keyword Matching	4%	16%	10%
P_5		10%	22%	20%
P_{10}		16%	26%	26%
P_1	Semantic Similarity	14%	46%	36%
P_5		34%	54%	52%
P_{10}		48%	56%	56%

RACS:  ROCS:  ROCS+:  RACS-: 

Discussion

- With some modifications, our RACS approach can be applied to a wider scope. For example, when used for another JavaScript framework, RACS needs to use only the framework's corresponding API documentation. For other programming languages, we can define more relationships that best show these languages' features.
- Our RACS approach attains the NL description for an API method from the API documentation's short description, which may not comprehensively capture the API method's semantics. The user may use a high-level description where one action maps to multiple API methods. Automatic techniques of comment generation may alleviate this problem. We can also attain more knowledge by crowdsourcing beyond API documentation.

Conclusion

- Existing code search approaches are not effective in finding code snippets that use JavaScript frameworks to implement a specific feature reflected by the given natural-language (NL) search query. In this paper, we have presented a novel Relationship-Aware Code Search (RACS) approach.
- RACS first collects a large number of code snippets that use some JavaScript frameworks in advance, mines API usage patterns from the collected code snippets, and represents the mined patterns with MCR graphs. Given an NL search query, RACS conducts NL processing to automatically transform the query to an AR graph. In this way, RACS reduces code search to the problem of graph search: searching the MCR graphs for a graph similar to the given AR graph. During the graph search, RACS includes a technique based on text semantic similarity to bridge the gap between NL actions in an AR graph and framework API methods in an MCR graph.
- We have conducted two evaluations against popular real-world jQuery questions (posted on Stack Overflow), based on 308,294 code snippets collected from over 81,540 files on the Internet. The evaluation results show the effectiveness of RACS: the top 1 snippet produced by RACS matches the target code snippet for 46% questions, compared to only 4% achieved by a relationship-oblivious approach (which shares key ideas with existing state-of-the-art code search approaches).
