SYBASE迁移PG项目
介绍

项目介绍

项目介绍

迁移评估

名称	SYBASE	PostgreSQL	匹配情况	备注
JDBC驱动接口	SYBASE JDBC	PostgreSQL JDBC	匹配	消息队列调用
C驱动接口	Open Client	libpq	匹配	中间件调用
数据表	数据表	数据表	匹配	
索引	索引	索引	匹配	
临时表	临时表	临时表	匹配	
存储过程	存储过程	函数	匹配	
数据类型	tinyint	同名domain	匹配	
数据类型	datetime	同名domain	匹配	

迁移评估

名称	SYBASE	PostgreSQL	匹配情况	备注
数据类型	CHAR	CHAR	匹配	
数据类型	INTEGER	INTEGER	匹配	
数据类型	VARCHAR	VARCHAR	匹配	
数据类型	SMALLINT	SMALLINT	匹配	
数据类型	DECIMAL	DECIMAL	匹配	

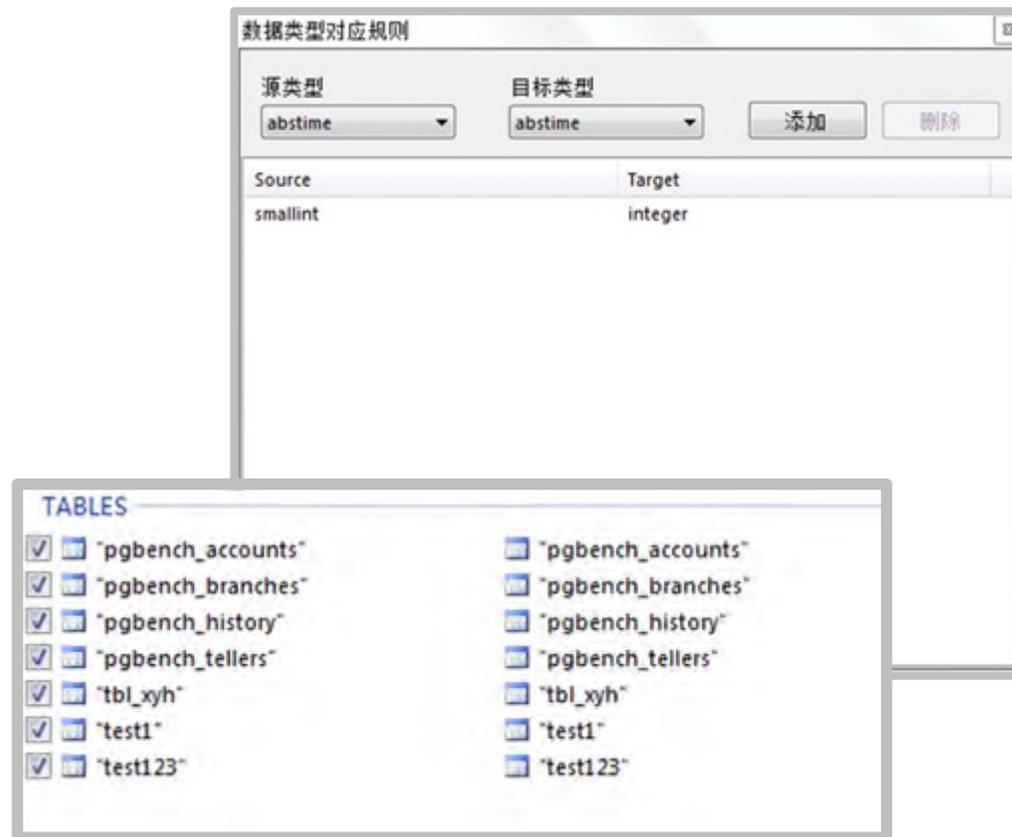

03

SYBASE to PG迁移
实践分享

自动化、工具化

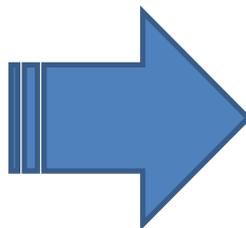

- 图像化操作界面，可自由筛选迁移对象。
- 支持数据类型对应规则。
- 迁移报错询问，避免中途回滚。

自动化、工具化

块语句结尾关键词补全

```
IF @ex1 = 1
BEGIN
  select @time_1=getdate()
  select @word = "hellow,world"
END
```

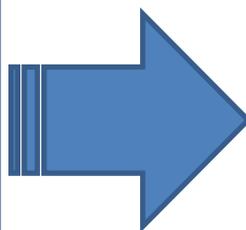

```
IF p_ex1=1 THEN
BEGIN
  v_time_1
=timeofday()::timestamp ;
  v_word = 'hellow,world';
END;
END IF;
```

自动化、工具化

特殊语句标记

```
BEGIN
  select @time_1=getdate()
  GOTO A
END
PRINT @word
A:
PRINT @time_1
```

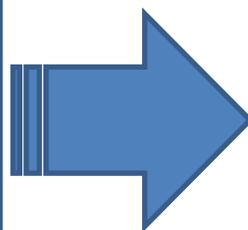

```
BEGIN
  v_time_1 =
timeofday()::timestamp ;
! GOTO A
END;
RAISE NOTICE '%', v_word;
! A :
RAISE NOTICE '%', v_time_1;
```

自动化、工具化

差异语句处理

```
IF @a = 1
BEGIN
  select @time_2 = time_clock
  from p_info_list
PRINT @word
END
```

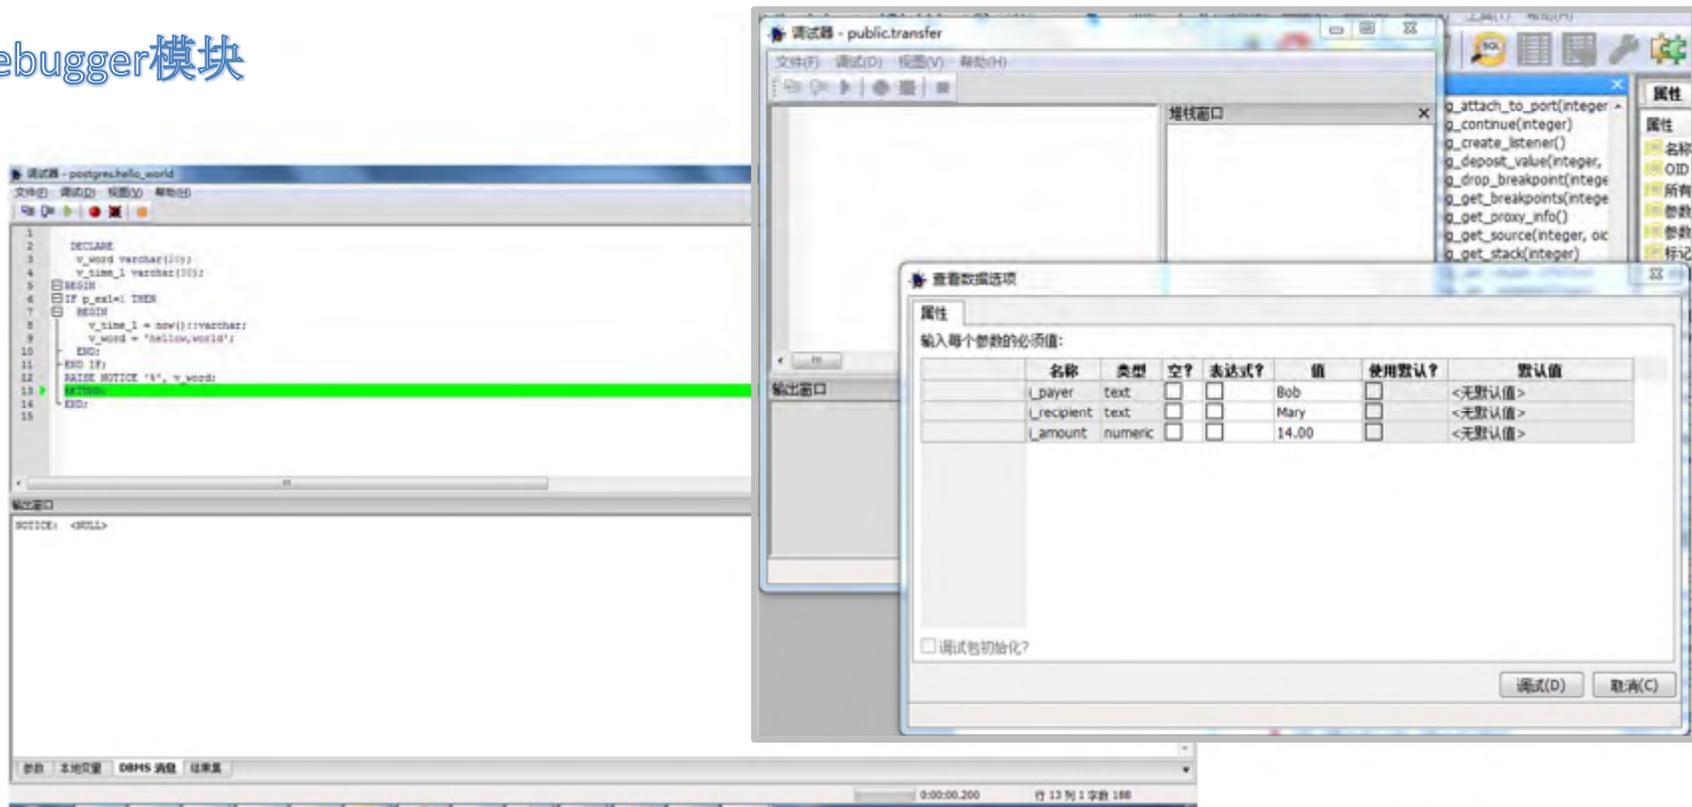

```
IF v_a =1 then
BEGIN
  select time_clock into v_time
  from p_info_list ;
RAISE NOTICE '%', v_word;
END;
END IF;
```

自动化、工具化

Pldebugger模块

利用PG可扩展性

datediff()

```
1> select datediff(hh,'2015-06-06  
14:21:23','2015-06-07 12:20:23')  
2> go
```

```
-----  
21
```

```
1> select  
datediff(ms,'20150606','20150607')  
2> go
```

```
-----  
86400000
```

```
postgres=# SELECT EXTRACT(DAY  
FROM('2015-06-07 12:20:23'::timestamp-  
'2015-06-06 14:21:23'::timestamp))*24  
+EXTRACT(HOUR FROM ('2015-06-07  
12:20:23'::timestamp-'2015-06-06  
14:21:23'::timestamp));  
?column?
```

```
-----  
21
```

```
postgres=# SELECT TRUNC(EXTRACT(EPOCH  
FROM('20150607'::timestamp-  
'20150606'::timestamp))*1000;  
?column?
```

```
-----  
86400000
```

利用PG可扩展性

datediff()

```
1> select datediff(hh,'2015-06-06  
14:21:23','2015-06-07 12:20:23')
```

```
2> go
```

```
-----  
21
```

```
1> select  
datediff(ms,'20150606','20150607')
```

```
2> go
```

```
-----  
86400000
```

```
postgres=# select datediff('hh','2015-  
06-06 14:21:23','2015-06-07 12:20:23');
```

```
datediff
```

```
-----  
21
```

```
postgres=# select  
datediff('ms','20150606','20150607');
```

```
datediff
```

```
-----  
86400000
```

标准化

- 便于备忘查阅。
- 便于统一人工翻译格式。
- 便于提供追溯依据。

数据类型			
Sybase Adaptive Server	Description	PostgreSQL	Description
char	一维	CHAR	一维
intsmall	整型	INTEGER	一维
datetime	年月日时分秒 毫秒	timestamp without time zone 或者 timestamp	年月日时分秒 毫秒 纳秒
varchar	一维	varchar	一维
nvarchar	Unicode制码类型的字符串，它所有的字符串都用两个字节表示	nvarchar	中文的字节，英文一字节
SMALLTEXT	一维	SMALLTEXT	一维
decimal	一维	decimal	一维
float	保存实数数据，范围从0到2 ⁵³ ，最大精度为11字节。	SMALLTEXT	保存实数数据，范围从0到 10 ³⁸ ，精度 = 32768

SQL 语法			
Sybase Adaptive Server	Description	PostgreSQL	Description
SELECT ... FROM ...			
select a, b, c from table1			

操作符			
Sybase Adaptive Server	Description	PostgreSQL	Description
*	取数	*	与sybase意义一致
**	字符串引号	''	次引号内为单引号
加号 (+)	加法运算或连接符	+	当与字符串为 '' 时，按字符串连接；否则为 +
*	乘法运算符	*	与sybase意义一致
/	除法	/	与sybase意义一致
<	小于	<	与sybase意义一致
=	等于	=	与sybase意义一致
char()	取值	char()	取值
*	按位运算	*	与sybase意义一致

内置函数			
Sybase Adaptive Server	Description	PostgreSQL	Description
charindex('a', 'a b c d', 1)	返回字符串中某个指定的子串出现的开始位置。	POSITION('a' IN 'a b c d')	与sybase意义一致
substring()	substring(expression, start, length) 返回部分字符串	substr(), substring()	与sybase意义一致
char_length()	返回字符串长度	LENGTH()	与sybase意义一致
ltrim()	删除左空	ltrim()	与sybase意义一致
rtrim()	删除右空	rtrim()	与sybase意义一致
sum()	求和	sum()	与sybase意义一致
count()	计数	count()	与sybase意义一致
abs()	绝对值	abs()	与sybase意义一致

游标			
Sybase Adaptive Server	Description	PostgreSQL	Description
close cur_22_fetch_train	关闭游标	close cur_22_fetch_train	关闭游标
deallocate cursor cur_22_fetch_train	删除游标	直接过程或关闭close cursor cur_22_fetch_train	直接过程或关闭

标准化

案例1: 跳转

A:

SELECT ...

IF ... GOTO A

INSERT ...

RETURN

<<A>>

LOOP

SELECT ...

IF ... THEN CONTINUE A;

END IF;

INSERT ...

EXIT A;

END LOOP;

RETURN;

标准化

```
SELECT ...  
IF ... GOTO B  
INSERT ...  
B:  
RETURN
```

```
SELECT ...  
<<B>>  
LOOP  
  IF ... THEN EXIT B;  
END IF;  
  INSERT ...  
  EXIT B;  
END LOOP;  
RETURN;
```

标准化

案例2: LIKE+char

```
1> CREATE TABLE TEST_8(a1  
CHAR(10))
```

```
2> go
```

```
1> INSERT INTO TEST_8 SELECT ' A '
```

```
2> go
```

```
(1 row affected)
```

```
1> SELECT * FROM TEST_8  
WHERE a1 like ' A '
```

```
2> go
```

```
a1
```

```
-----
```

```
A
```

```
(1 row affected)
```

```
1> SELECT * FROM TEST_8  
WHERE ' A ' like a1
```

```
2> go
```

```
a1
```

```
-----
```

```
A
```

标准化

```
postgres=# CREATE TABLE  
TEST_8(a1 CHAR(10));  
CREATE TABLE
```

```
postgres=# INSERT INTO TEST_8  
SELECT ' A ';  
INSERT 0 1
```

```
postgres=# SELECT * FROM  
TEST_8 WHERE a1 like ' A    ';  
a1
```

```
-----  
A  
(1 row)
```

```
postgres=# SELECT * FROM  
TEST_8 WHERE ' A    ' like a1;  
a1
```

```
----  
(0 rows)
```

标准化

```
postgres=# SELECT * FROM TEST_8 WHERE a1 like ' A '::char(10);
```

```
 a1
```

```
----
```

```
(0 rows)
```

```
postgres=# SELECT * FROM TEST_8 WHERE rtrim(a1) like ' A '::char(10);
```

```
 a1
```

```
-----
```

```
 A
```

```
(1 row)
```

PostgreSQL

标准化

案例3: rtrim()

```
1> select rtrim('')
2> go
```

-

```
NULL
(1 row affected)
```

```
1> select rtrim(null)
2> go
```

```
(1 row affected)
```

```
postgres=# select
rtrim('') || '1';
?column?
```

```
-----
1
(1 row)
```

```
postgres=# select
rtrim(null) || '1';
?column?
```

```
-----
(1 row)
```

标准化

案例4：取数据并赋值

```
CREATE PROC test_pro8
@a VARCHAR(10) = "HELLO"
AS
BEGIN
    select @a=a1 from testgg
where 1=2
    print @a
END
```

```
1> CREATE TABLE testgg(a1
varchar(10))
```

```
2> go
```

```
1> EXEC test_pro8
```

```
2> go
```

```
HELLO
```

```
(return status = 0)
```

标准化

```
CREATE FUNCTION test_pro8
(a varchar(10)='HELLO')
RETURNS void AS
$$
BEGIN
    SELECT a1 INTO a FROM testgg
    WHERE 1=2;
    RAISE NOTICE '%',a;
END;
$$
LANGUAGE plpgsql ;
```

```
postgres=# create table
testgg(a1 varchar(10));
CREATE TABLE
```

```
postgres=# select * from
test_pro8();
NOTICE: <NULL>
test_pro8
```

(1 row)

标准化

```
CREATE FUNCTION test_pro8
(a varchar(10)='HELLO')
RETURNS void AS
$$
DECLARE
cur REFCURSOR;
BEGIN
    OPEN cur FOR SELECT a ;
    SELECT a1 INTO a FROM testgg WHERE 1=2;
    IF NOT FOUND THEN
        FETCH cur INTO a;
    END IF;
    RAISE NOTICE '%',a;
END;
$$
LANGUAGE plpgsql ;
```

```
postgres=# create table testgg(a1
varchar(10));
CREATE TABLE
```

```
postgres=# select test_pro8();
NOTICE: HELLO
test_pro8
```

```
-----
(1 row)
```

标准化

案例5：子过程调用

```
CREATE proc proc10
@b int output
AS
SELECT @b=@b+1
RETURN 3
```

```
CREATE proc proc11
AS
DECLARE
@a INT,@c INT
SELECT @c=5
EXEC @a=proc10 @b=@c OUTPUT
select @a AS a,@c AS c
```

```
1> EXEC proc11
```

```
2> GO
```

```
a      c
-----
      3      6
```

```
(1 row affected)
```

```
(return status = 0)
```

标准化

```
CREATE proc proc10
  @b int output
AS
SELECT @b=@b+1
RETURN 3
```

```
CREATE FUNCTION proc10(INOUT
  b INT,INOUT v_ret INT=null)
AS $$
BEGIN
    $1=$1+1;
    $2=3;
    RETURN;
END;
$$
LANGUAGE plpgsql;
```

标准化

```
CREATE proc proc11
AS
DECLARE
@a INT,@c INT
SELECT @c=5
EXEC @a=proc10 @b=@c
OUTPUT
select @a AS a,@c AS c
```

```
CREATE FUNCTION proc11()
RETURNS VOID AS $$
DECLARE
a INT;c INT ;
BEGIN
c=5;
SELECT p.v_ret,p.b INTO
a,c from proc10(b:=c) as p;
RAISE NOTICE '%',a||'|' ||c;
END;
$$
LANGUAGE plpgsql;
```

标准化

```
postgres=# select proc11();  
NOTICE: 3 6  
proc11  
-----  
  
(1 row)
```

Thanks!

Q & A
