# JIT CONSTRAINT

PSEUDO-MAIN SCOPE

- Volatile Variable In Main Scope
- We Don't Optimize Codes In Main Scope

```
set_error_handler(function() {  
    $GLOBALS['a'] = "str";  
} );
```

```
$a = 1;  
$b = $c;
```

# JIT CONSTRAINT

DYNAMIC SCOPE INTROSPECTION

- Dynamic Scope Modification
- Can Not Optimize Codes Which Include Such Usage

```
function example() {  
    $a = 1;  
    $b = "a";  
    ${$b} = "str";  
}
```

```
function example() {  
    $a = 1;  
    extract(array("a" => "str"));  
}
```

# JIT CONSTRAINT

## REFERENCE

- Reference Arguments Passing Can Only Be Seen In Callee-Side

```
function fn (&$val) {  
    $val = "str";  
}
```

```
function example () {  
    $a = 1;  
    fn ($a);  
}
```

# JIT CONSTRAINT

INDEPENDENT SCRIPTS

- Inter-Script Optimization Is Impossible

```
if ($_GET["first"] ) {  
    include "a.php";  
} else {  
    include "b.php";  
}
```

```
function example() {  
    $a = fn();  
}
```

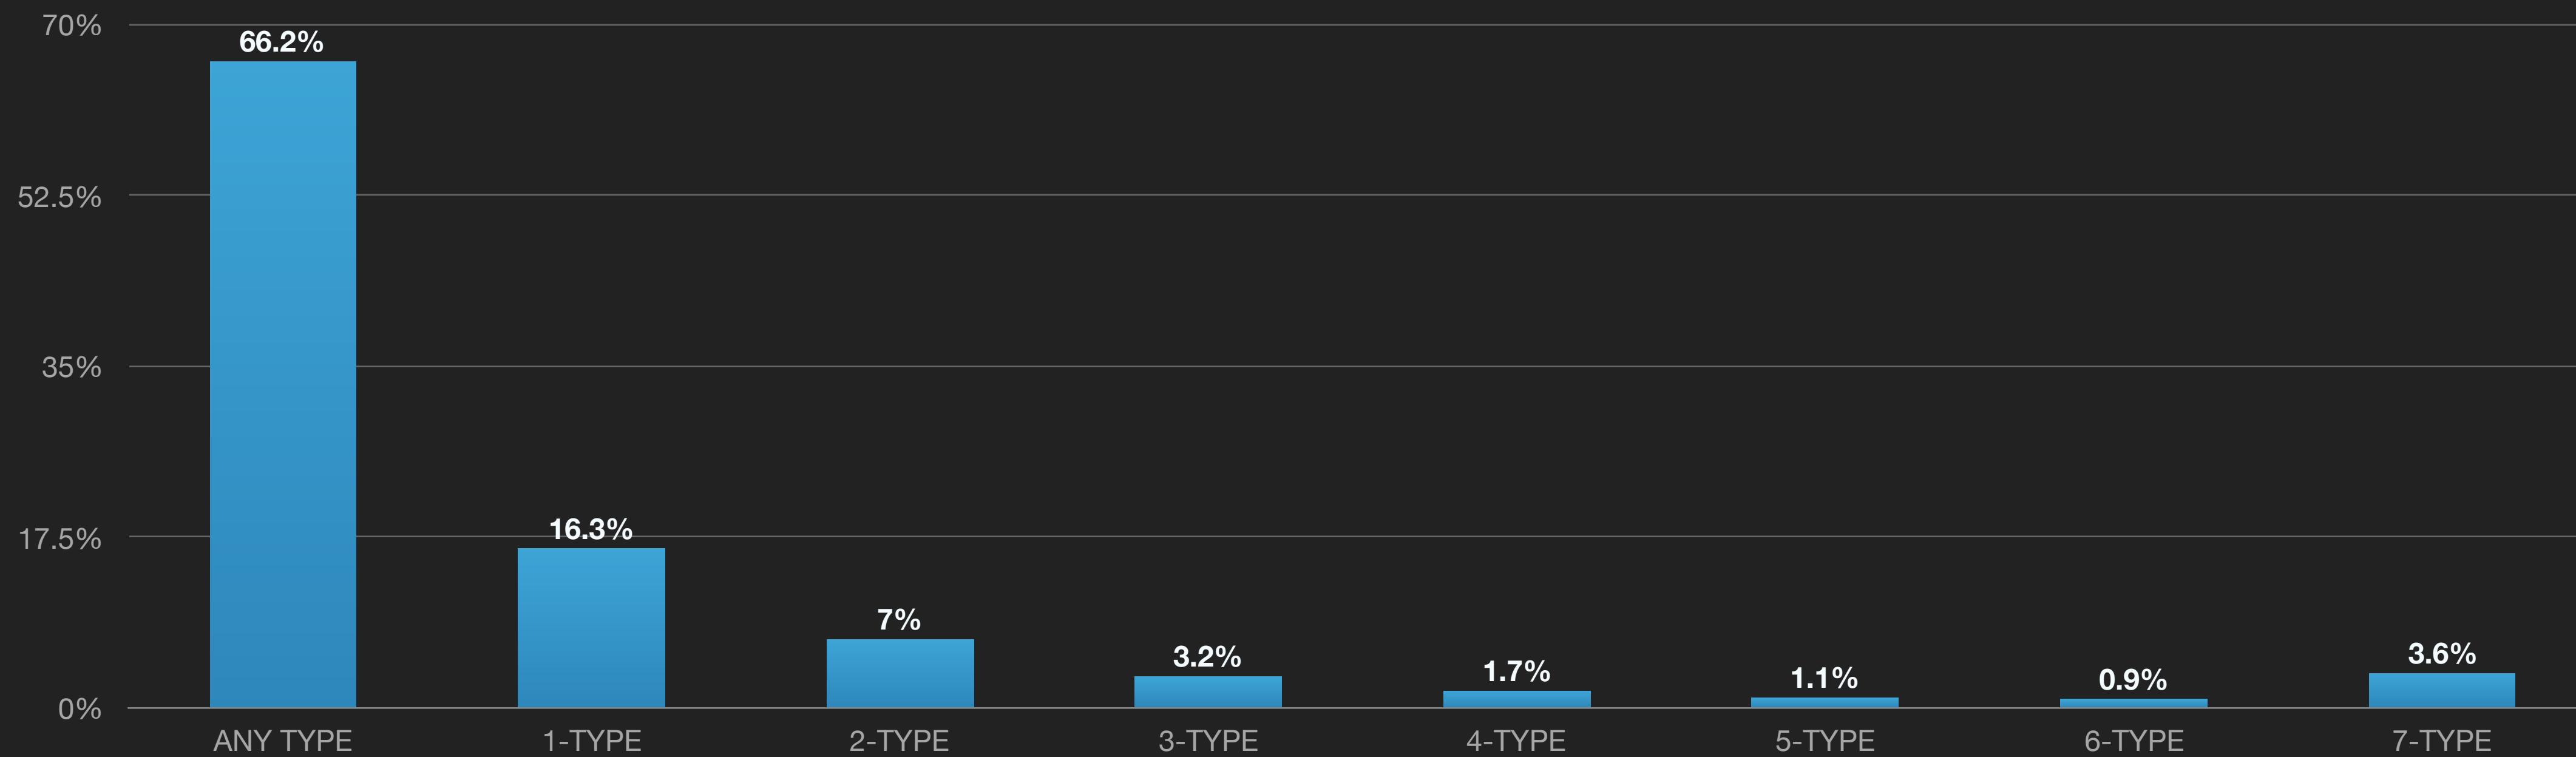

```
function fn() {  
    return "str";  
}
```

```
function fn() {  
    return array();  
}
```

# JIT CONSTRAINT

THATS WHY

- Wordpress Homepage Type Inference Result

# JIT CONSTRAINT

THATS WHY

- Visible Improvement On Old Applications
- Significant Improvement On Well-Written Codes
- Type Inference Plays Very Important Role In Jit
- More Type Info == More Performance Improvement
- Use Type-Hints If You Could

```
function add(int $a, int $b):int {  
}
```
