

Tear Down Master Class

尊敬的 _____ 先生/女士，您好！

Tear Down Master Class将于2018年05月在上海召开。

会议内容

With the increasingly competitive marketplace, significant new detailed attention is necessary in the earliest phases of product and process development. Comparative Analysis is applied as early as the pre-design phase, where materials, product configuration, and what will be product functions are analyzed. The results of the analysis should be reflected in Tear Down. Based on the data collected through the comparative analysis, Tear-down Targets for each Function, Cost and Product weight, respectively, are established. This specific goal data is to be importantly used in the company's product development process.
